About me

From the moment I produced "Hello World" in the console of my first application, I knew I was hooked into the world of programming. From the start, I haven't looked at the world of software development as "just a job", as it has offered me an engaging challenge to continually learn and improve my skills in creating high-quallity experiences.

Languages

PORTUGUESE - Native

ENGLISH - Fluent

Technical Skills

ReactJS | NextJS | JavaScript
TypeScript | HTML | CSS | SCSS
Git

Experience

SOLARIS
www.planets.brunosantos.dev
github.com/humbruno/planets-fact

Solaris is a single-page application built with ReactJS and SCSS. The page offers a navigation menu at the top, as well as sub-categories for each page where the date is fetched from a local JSON file and rendered onto the page with the use of React's Context API.

DEVFINDER
www.devfinder.brunosantos.dev
github.com/humbruno/devfinder

Devfinder is a page component build with ReactJS and Axios. It works as a search engine for profiles on GitHub, where the date is fetched directly from GitHub's API with the use of the Axios library. The page also offers a light/dark theme toggle, built with SCSS and React's Context API.
